About Bone Therapeutics

Bone Therapeutics is a regenerative therapy company specializing in addressing unmet medical needs in the field of orthopaedics via a minimally invasive approach. Utilizing the Company's unique knowledge of the bone physiology and long-standing expertise in cell therapy and cell transplantation, Bone Therapeutics has created a fully integrated business with an advanced product pipeline comprising novel regenerative products, tailored in-house production methods, and minimally invasive treatment techniques.

Bone Therapeutics' PREOB® is an autologous bone cell product, currently in phase III clinical trials for the treatment of osteonecrosis and non-union fractures as well as in a phase II trial for severe osteoporosis. Bone Therapeutics is also developing an allogeneic bone cell product, ALLOB®, which is in a phase II clinical trial for delayed union fractures. All of Bone Therapeutics' regenerative products are manufactured to the highest GMP standards and protected by a rich IP estate.

The bone disease and reconstruction market is one of the largest healthcare markets in the world, with more than 4 million procedures requiring bone grafts performed annually in Europe and the USA alone. Bone Therapeutics is operating in areas where demand for new products is high and competition is low. Founded in 2006, Bone Therapeutics is privately held and headquartered in Gosselies (south of Brussels), Belgium.
